By this time I expect you have read my letter in today's Republic. I believe the HTC lease is up for renewal this year. The contents of the letter is only the tip of the "iceberg". I have information that puts the total lead deposited on the shot field to be in excess of near 400 tons since the HTC started operations. Every bit of information is circumstantial because accurate data is hard to come by, but what is available is based on information obtained from club member information and figures release by the HTC president. One expert shooter (who will not have any dealings with the HTC because of what is going on) estimates the cost to reclaim the property safe enough to allow human use will exceed one million dollars. I will be glad to make my files available to you for your information only. No one has any idea about the ramifications here because there has never been an honest evaluation of the situation.
